

## EPIDEMIOLOGICAL SITUATION

- As of 2 July 2022, the Eastern Mediterranean Region (EMR) has reported 22 065 184 confirmed COVID-19 cases and 343 659 deaths since the start of the pandemic.
- During the reporting period, and in comparison with the previous month:<sup>1</sup>
  - The Region reported 272 942 new cases (261% increase). 16 countries reported an increase in cases.
  - 5 countries reported an increase in deaths; an 18% increase.
  - Conducted tests increased by 11%. Cumulatively, the total number of tests in the Region has reached 404 929 535.
- To date, 17 countries in the Region have reported the detection of the Omicron variant of concern (VOC) including 15 countries that have reported the BA.1 sub-lineage, 12 countries the BA.2 sub-lineage, 1 country the BA.4 sub-lineage, and 3 countries the BA.5 sub-lineage.

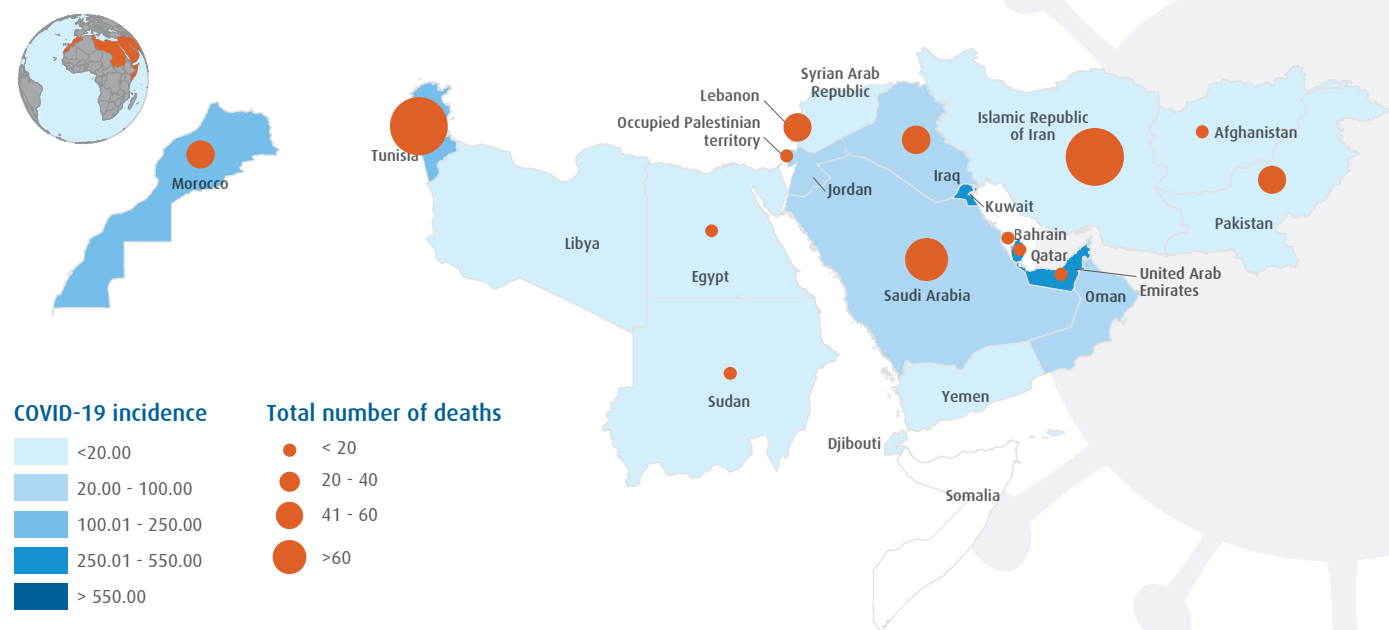

## SITUATION IN NUMBERS

## REGIONAL RESPONSE HIGHLIGHTS

### Partnership and Coordination

- Held weekly and monthly meetings with health cluster coordination teams in EMR countries.
  - Continued to follow up on information shared by country health clusters coordination teams such as the latest epidemiological trends, vaccination data, gaps in the COVID-19 response, coordination of risk communication and community engagement activities, integration of the COVID-19 response in essential health services, and partner activities.
  - Shared updated WHO guidance and recommendations with all partners.
- 

### Operations Support and Logistics

- Dispatched US\$ 5.5 million worth of health supplies across 28 countries in four WHO regions.
  - Continued to provide personal protective equipment (PPE), biomedical supplies, and laboratory diagnostics (to cover over 200,000 tests) to countries from WHO's logistics hub in Dubai.
- 

### Health Information and Technical Expertise

#### Infection Prevention and Control (IPC)

- Conducted a virtual regional webinar, in collaboration with a WHO collaborating center, on IPC best practices in response to COVID-19 in intensive care settings, for 500 IPC professionals and frontline health care workers from the Region.
  - Trained 104 IPC professionals from Iraq and Libya's national and hospital IPC teams on methods and tools for the surveillance of COVID-19 infections among health care workers.
- 

### Research and Knowledge Management

- Conducted a mission to Somalia to develop national capacity to use evidence for policy development and strengthen health information systems.
  - Received over 80 submissions after a call for COVID-19 research, which are currently under peer review.
  - Adapted country-specific questionnaires for Egypt, Jordan, Pakistan, and the Islamic Republic of Iran, based on the two main WHO generic protocols for the evaluation of COVID-19 vaccine effectiveness.
- 

### COVID-19 Vaccine

- Conducted a COVID-19 Vaccination Delivery Partnership (CoVDP) mission to Somalia and Sudan.
- Participated in the vaccination review meeting for Yemen with Gavi, the Vaccine Alliance, from 13 to 16 June 2022 in Amman, Jordan.
- Monitored vaccines with close expiry dates to assist countries in planning to ensure vaccines are consumed before expiring.

## IN FOCUS: Reviewing the response to COVID-19 and other priority infectious hazards in Sudan

From 12-17 June, 10 technical experts from WHO's Regional Office for the Eastern Mediterranean traveled to Sudan to review the national and subnational response to COVID-19, as well as other priority emergency hazards. The purpose of the mission was to support the country in reviewing the measures of response to the ongoing outbreaks of COVID-19 and the high-risk infectious hazards prioritized for direct and proxy interventions (measles, cholera, dengue fever, malaria, floods and heavy rain, and armed conflict and civil unrest), to identify and document strengths and areas of improvement, and to provide recommendations to scale up overall readiness and operations. Preliminary findings and recommendations were presented to the Ministry of Health, partners, and WHO Sudan, and will be shared in a final report. Recommendations will allow to strengthen the existing COVID-19 response and improve preparedness and response for other current and future outbreaks.
