

Table 2 Logistic regression analysis of factors associated with opium use

Independent variable	Adjusted OR	95% CI	P-value
Sex (male versus female)	4.22	1.10–55.55	0.048
Age (each year increase)	1.01	0.98–1.05	0.431
Marital status (currently married versus other)	0.48	0.09–2.43	0.372
Education level (each level increase)	1.13	0.79–1.60	0.506
Employment (unemployed versus employed)	5.13	1.90–13.80	0.001
Cigarette smoking (> 1 cigarette/day versus non-smoker)	10.35	4.53–23.63	< 0.001
