

Table 7 Odds ratios of predictors of transition across smoking stages between assessments at baseline and after 12 months

Variable	Latent status transition		
	Never smoker to experimenter	Never smoker to regular smoker	Experimenter to regular smoker
<i>Intercept (odds)</i>	0.02	0.001	0.31
<i>Sex (being boy)</i>	2.78	7.85	8.30
<i>Age (higher age)</i>	1.05	1.10	1.19
<i>Education major</i>			
Mathematics and physics	1.00	1.00	1.00
Empirical science	1.45	1.12	1.63
Humanities	1.15	0.99	2.19
Technical and vocational; Work and knowledge	1.28	3.37	2.18
Average school grade (higher grade)	0.95	0.97	0.94
<i>Socioeconomic status</i>			
Very low	1.00	1.00	1.00
Low	0.89	1.22	0.92
Middle	0.83	1.10	0.69
High	1.16	1.76	0.62
Very high	1.09	1.02	2.71
<i>Living with parents</i>	0.70	0.92	0.48
<i>Having smoker in the family</i>	1.33	1.02	1.52
<i>Having smoker friend</i>	1.65	1.83	1.99
<i>Lower self-esteem</i>	1.03	1.04	1.01
<i>Attitude to smoking score</i>			
-12	1.00	1.00	1.00
-9 to -11	2.10	1.63	3.42
> -9	3.42	3.29	4.56
<i>Substance abuse</i>	0.99	1.12	6.65
<i>Having general risk-taking behaviours</i>	1.66	1.83	0.56
<i>Self-injury</i>	2.03	2.81	1.01
