Table 4 Logistic regression analysis: independent association between use of complementary and alternative medicine and selected external predictors

Variable	Odds ratio	95 % confidence interval	
		Lower bound	Upper bound
(Constant)	0.354	−0.075	0.782
Availability of CAM	0.117	−0.024	0.257
Previous positive experience with CAM	0.139	0.002	0.275
Parents' attitude about CAM combination	0.067	−0.024	0.157
Health care providers' recommendation	0.311	0.125	0.498
Mean child age	0.014	0.001	0.027

Only variables with P < 0.25 in statistical comparison between users and non-users were entered into the analysis.
