Note: Indicator values presented here may differ from country data sources due to the use of standardized categories and methods to enhance international comparability. See Indicator Description Sheet for details.

Note: Scores for the Capacity, Performance, and Equity domains are color-coded to reflect good (green), medium (yellow), and poor (red) performance, where comparable data are available. Cut-offs can be found in the indicator Description Sheet. Scores based on data from non-comparable sources are colored gray. Finance indicators are not color-coded because these indicators lack common targets.

2. Domestic general government PHC expenditure as % of domestic general government health expenditure
 3. Domestic general government PHC expenditure as % of current PHC expenditure
 4. The PHC Progression Model uses mixed methods to assess foundational capacities of PHC on a scale from 1 (low) to 4 (high)
 5. Because different data/indicators are used in each country, composite index values may not be comparable across countries. See page 2 for the specific indicators used in this VSP.
 6. The composite coverage index is a weighted score reflecting coverage of eight RMNCH interventions along the continuum of care (http://www.who.int/gho/health_equity/report_2015/en/)

7. Deaths of children before age 5, per 1,000 live births
 8. 32.5% under national poverty line; Campus report 2017-2018
 9. Domestic general government health expenditure as % of gross domestic product (GDP)
 10. Maternal mortality: Country value 43.4 (2019 EMRO core indicators booklet).
 11. Neonatal mortality: 7.2; NICHP2018
 12. Probability of dying between ages 30 and 70 from cardiovascular disease, cancer, diabetes, or chronic respiratory disease
 13. Communicable, maternal, perinatal, and nutritional conditions

Egypt	SCORE	PERCENTAGE	SOURCE	YEAR
ACCESS	86			
Financial				
Perceived access barriers due to treatment costs*		11%		DHS Report 2014
Geographic				
Perceived access barriers due to distance*		18%		DHS Report 2014
QUALITY				
Comprehensiveness				
No recent indicator available from international or national data sources				
Continuity				
DTP3 dropout rate*		0.8%		National Information Centre for Health and Population 2019
Treatment success rate for new TB cases		86%		WHO estimate (GHO) 2018
Person-Centeredness				
No recent indicator available from international or national data sources				
Provider availability				
No recent indicator available from international or national data sources				
Safety				
No recent indicator available from international or national data sources				
SERVICE COVERAGE	59			
Reproductive, Maternal, Newborn and Child Health				
Demand for family planning satisfied with modern methods		81%		Regional core indicators booklet 2019
Antenatal care coverage (4+ visits)		88%		Regional core indicators booklet 2019
Coverage of DTP3 immunization		95%		MoH Statistical Yearbook 2018
Care-seeking for suspected child pneumonia		68%		Regional core indicators booklet 2019
Infectious diseases				
Tuberculosis cases detected and treated with success		69%		WHO TB Country Profile 2019
People living with HIV receiving anti-retroviral treatment		31%		Regional core indicators booklet 2019
Children under 5 with diarrhea receiving ORS***		28%		DHS Report 2014
Non-Communicable Diseases (NCDs)				
% of population with normal blood pressure****		75%		Regional core indicators booklet 2019

*Indicators where lower values are preferable were transformed before inclusion in the index. The modified indicator was defined as 100-X, where X is the original percentage shown in this table.
 Country-specific (proxy) indicator, used in absence of globally comparable survey data. *10.2 IMCI Department of MOHP. ****Percentage of adult population with normal blood pressure is based on age-standardized estimates. These distributions are rescaled to provide finer resolution before inclusion in the index. Rescaled indicator = (X-50)/(100-50)*100, where X is the prevalence of normal blood pressure. For more details see Tracking UHC: 2017 Global Monitoring Report. Note: Summary scores for the domains of Access, Quality, and Coverage are calculated by taking the average of indicator values within each subdomain, and then taking the average across subdomain scores.
