Annual Health Report (2019)

Note: Indicator values presented here may differ from country data sources due to the use of standardized categories and methods to enhance international comparability. See Indicator Description Sheet for details.

Note: Scores for the Capacity, Performance, and Equity domains are color-coded to reflect good (green), medium (yellow), and poor (red) performance, where comparable data are available. Cut-offs can be found in the Indicator Description Sheet. Scores based on data from non-comparable sources are colored gray. Finance indicators are not color-coded because these indicators lack common targets.

1. GDP per capita: \$3,254 according to EMRO financial estimates (2017)

2. Population living in poverty: 16.8% for 2017, Regional Core Indicators Booklet 2020

3. Domestic general government health expenditure as % of gross domestic product—Government health spending as % of GDP: 3.5% according to EMRO WHO estimates (2017)

4. Neonatal mortality rate: 9.4% MICS 2020

5. Probability of dying between ages 30 and 70 from cardiovascular diseases, cancer, diabetes, or chronic respiratory disease

6. Causes of death: Reflects West Bank only

7. Communicable, maternal, perinatal and nutritional conditions

8. Current PHC expenditure as % of Current Health Expenditure (CHE)

9. Domestic general government PHC expenditure as % of domestic general government health expenditure: 3.5% according to EMRO WHO estimates (2017)

10. Domestic general government PHC expenditure as % of current PHC expenditure

11. The PHC Progression Model uses mixed methods to assess foundational capacities of PHC on a scale from 1 (low) to 4 (high)

12. Because different data/indicators are used in each country, composite index values may not be comparable across countries. See page 2 for the specific indicators used in this VSP.

13. The composite coverage index is a weighted score reflecting coverage of eight RMNCH interventions along the continuum of care. Last updated 10/2022.

SERVICE COVERAGE				
68				
Reproductive, Maternal, Newborn and Child Health				
Demand for family planning satisfied with modern methods		64%	Regional Core Indicators Booklet	2020
Antenatal care coverage (4+ visits)		96%	Regional Core Indicators Booklet	2020
Coverage of DTP3 immunization		100%	Regional Core Indicators Booklet	2020
Infectious diseases				
Tuberculosis cases detected and treated with success		80%	WHO TB Programme	2019
People living with HIV receiving anti-retroviral treatment		96%	Regional Core Indicators Booklet	2020
Non-Communicable Diseases (NCDs)				
% of population with normal blood pressure***		64%	Regional Core Indicators Booklet	2020
<p>*Indicators where lower values are preferable were transformed before inclusion in the index. The modified indicator was defined as 100-X, where X is the original percentage shown in this table.</p> <p>**Country-specific (proxy) indicator, used in absence of globally comparable survey data. ***Percentage of adult population with normal blood pressure is based on age-standardized estimates. These distributions are rescaled to provide finer resolution before inclusion in the index. Rescaled indicator = (X-50) / (100-50)*100, where X is the prevalence of normal blood pressure. For more details see Tracking UHC: 2017 Global Monitoring Report. Note: Summary scores for the domains of Access, Quality, and Coverage are calculated by taking the average of indicator values within each subdomain, and then taking the average across subdomain scores.</p>
