

Highlights

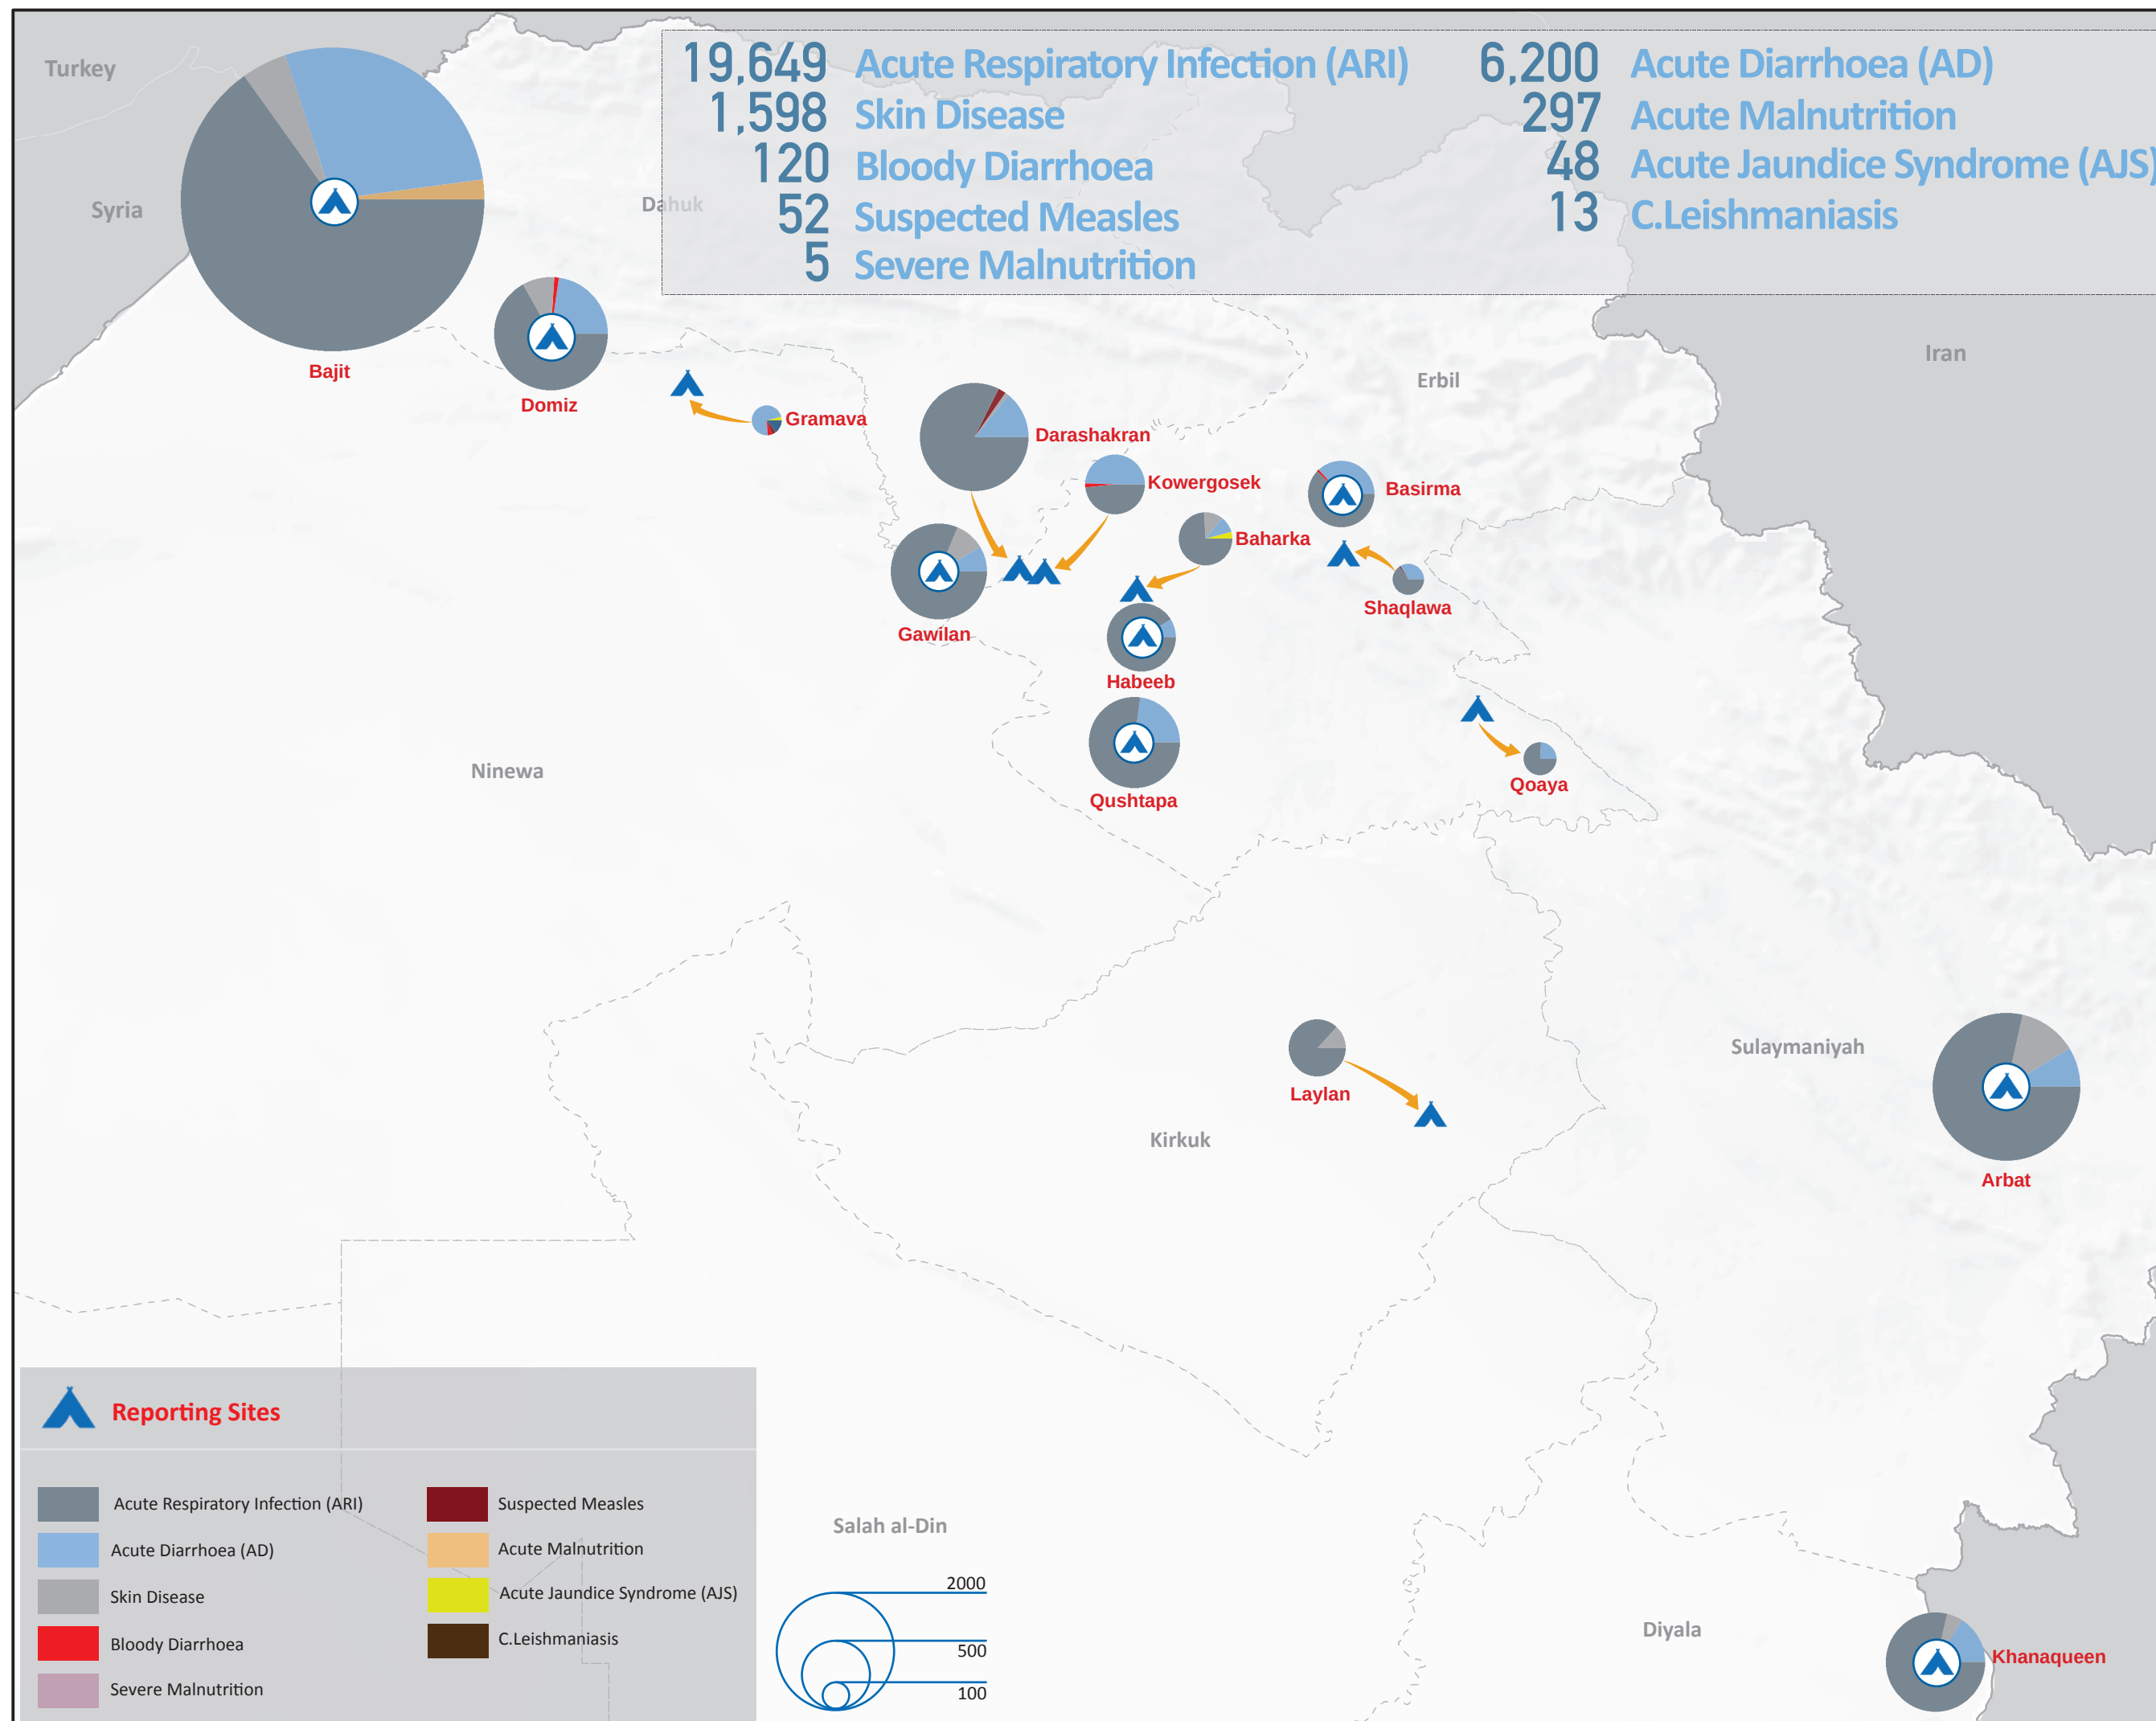

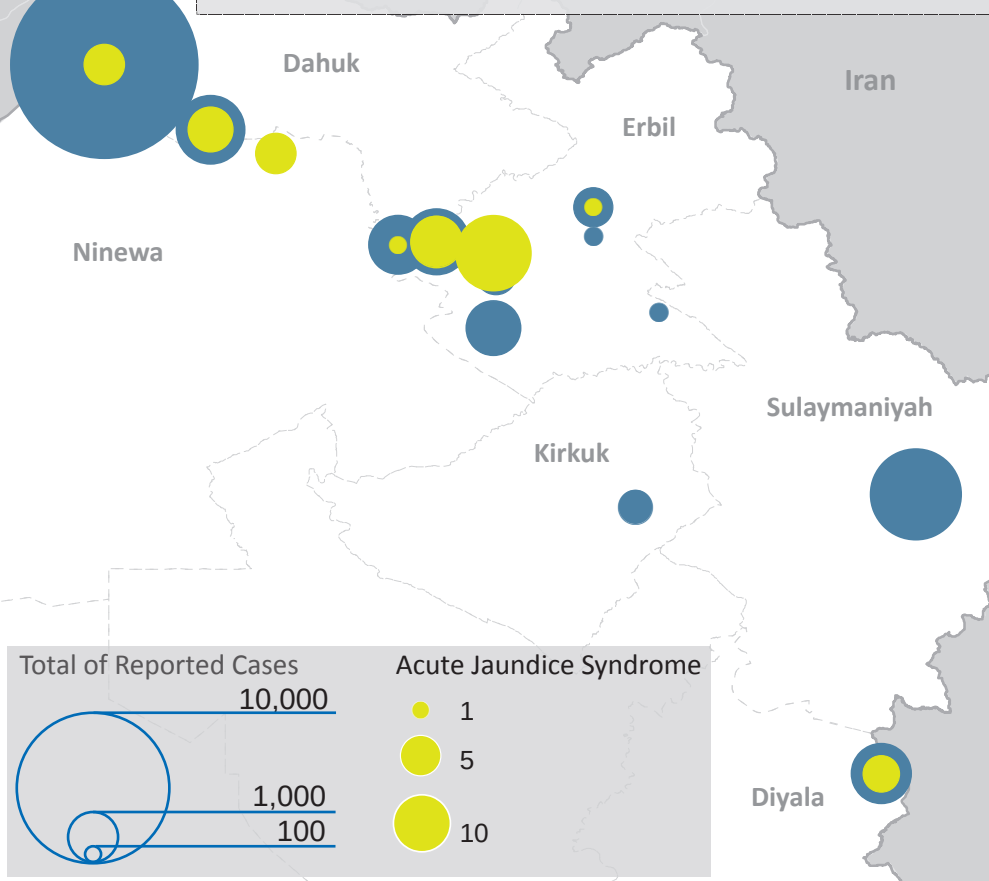

In week 48, a total number of 11,959 consultations were reported from 13 reporting sites, namely; Baharka, Bajit, Gawilan, Domiz, Qushtapa, Basirma, Darashakran, Kowergosek, Arbat 1 and 2, Gramava, Khanaqueen and Laylan. This brings the number of consultation recorded since the EWARN system was initiated to 98,631. Of the consultations recorded in week 48, 2,825 cases (24%) were Acute Respiratory Tract Infection (ARI) and 539 (5%) were cases of Acute Diarrhoea (AD).

Banjit Kandala camp reported the highest caseload of AD; 324 (62.3%) and ARI, 866 (31%) in week 48. This was followed by Kowergosek 42 (8%) and Domiz (6.1%) for AD and Darashakran 531 (19%) and Arabat I and II, 349 (12.4%) for ARI cases.

Majority of cases of AD (40%) and ARI (47.1%) reported in this week 48 were registered among children under five years. The highest numbers of cases of AD (25%) among under five children were recorded from Bajit Kandala and ARI (10.2%) from Darashakran. The increase in the number of ARI cases could be associated to the winter season that started in late November; this is likely to increase in the coming month posing public health risks on children and other vulnerable groups. The Ministry of Health with in collaboration with WHO and other Health partners have stepped up surveillance during the winter season. WHO requires US \$ 23 Million to provide additional support to the displaced people and host communities during the harsh weather conditions in Iraq.

Acute viral hepatitis outbreak was detected on 23 November 2014 in Barhaka camp. While the outbreak is not escalating, it is not over yet; in week 48, two cases were recorded, this brings the total number of cases reported since the first cases were detected to 48 from nine reporting sites. Health partners are conducting hygiene and health education and promotion activities in the camp.

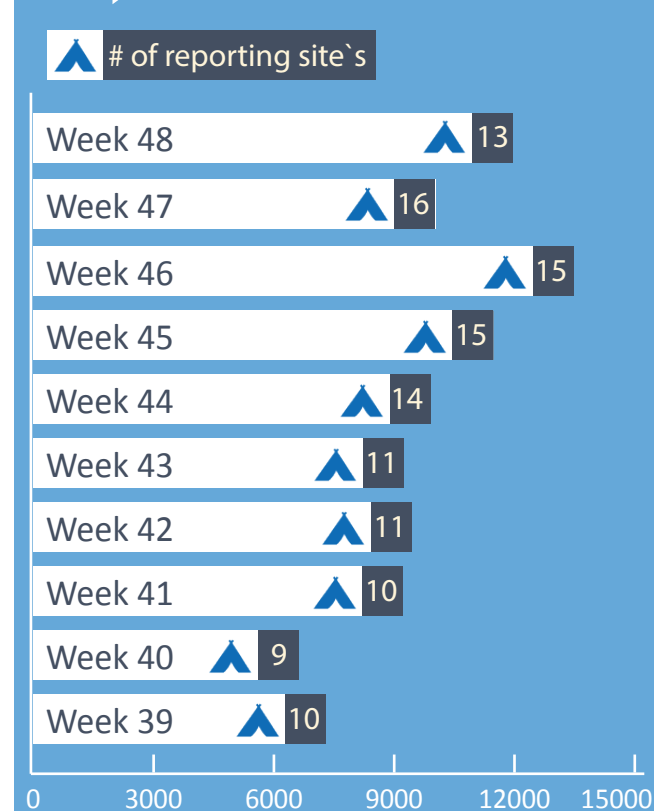

27,982 Total Reported Cases of all Diseases

All diseases reported by age

98,631 # of Consultations

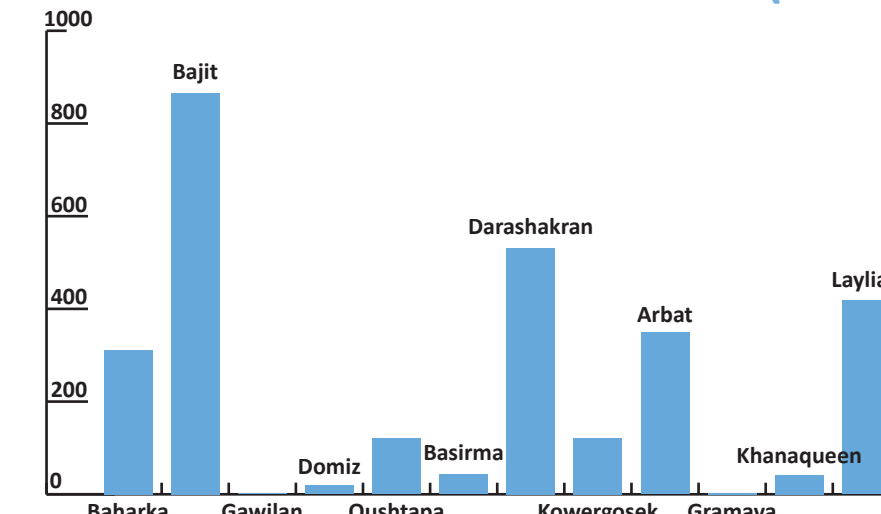

Disclaimer:

- The results shown in this EWARN snapshot are incomplete as the EWARN system is still a the rollout phase.
- The results shown here are from 16 reporting sites (8 IDP camps and 8 Refugee camps)
- The consultation data presented here is collected and reported from the EWARN system

3,573 Total Reported Cases (week 48)
