

## Highlights of Polio Fax Bulletin No. 1109 for Week 01 2020

### I. Wild Poliovirus Transmission

**Endemic countries (PAKISTAN & AFGHANISTAN):** Following was reported this week:

- 13 new wild poliovirus type-1 (WPV1) cases, 2 from Afghanistan and 11 from Pakistan
  - 14 new positive WPV1 environmental samples, 2 from Afghanistan and 12 from Pakistan
- a. *Human samples:* 13 new WPV1 cases reported this week. Total WPV1 cases in 2019 to date are 156 (28 from Afghanistan and 128 from Pakistan). This compares with 33 cases in 2018 in the same period (Afghanistan – 21 and Pakistan – 12).
- Afghanistan: Two new WPV1 cases reported this week and details are as follows:
    - Case (1): The case is from Bakwa district, Farah province, with date of onset 25 November 2019. The case is a 25-month old female child. The child received 7+ OPV doses from supplementary immunization activities (SIAs) and none from routine.
    - Case (2): The case is from Shahwalikot district, Kandahar province, with date of onset 7 December 2019. The case is an 18-month old male child. The child did not receive any OPV doses neither from routine nor from SIAs.

In 2019 to date, 28 WPV1 cases are reported. They include 9 cases from Uruzgan province, 5 cases from Hilmand province, 6 from Kandahar province, 2 each from Paktika and Farah provinces and 1 each from Kunar, Nangarhar, Badghis and Baghlan provinces. The most recent case has onset of paralysis on 7 December 2019.
  - Pakistan: Eleven new WPV1 cases reported this week and details are as follows:
    - Case (1): The case is from Kambar district, Sindh province, with date of onset 2 November 2019. The case is a 24-month old female child. The child reportedly received 10 OPV doses out of which 3 doses were from routine and 7 doses from SIAs. The index case was identified as wild by a positive contact.
    - Case (2): The case is from Bannu district, Khyber Pakhtunkhwa (KP) province, with date of onset 13 November 2019. The case is a 26-month old male child. The child reportedly received 7+ OPV doses all from SIAs and none from routine. The index case was identified as wild by a positive contact.
    - Case (3): The case is from Killa Abdullah district, Balochistan province, with date of onset 19 November 2019. The case is a 70-month old male child. The child reportedly received 7 OPV doses all from SIAs and none from routine. The index case was identified as wild by a positive contact.
    - Case (4): The case is from Mirpurkhas district, Sindh province, with date of onset 1 December 2019. The case is a 48-month old female child. The child reportedly received 7 OPV doses all from SIAs and none from routine. The index case was identified as wild by 2 positive contacts.
    - Case (5): The case is from Dadu district, Sindh province, with date of onset 6 December 2019. The case is a 5-month old female child. The child received only 1 OPV dose from SIAs and none from routine.
    - Case (6): The case is from DI Khan district, KP province, with date of onset 14 December 2019. The case is a 24-month old female child. The child reportedly received 7 OPV doses from SIAs and none from routine.
    - Cases (7 & 8): The cases are from Tank district, KP province, with date of onset 15 and 18 December 2019 respectively. The cases are 30 and 5 month old female and male children. Both children did not receive any OPV doses neither from routine nor from SIAs due to refusal and they are sister and brother.

Case (9): The case is from Jaffarabad district, Balochistan province, with date of onset 18 December 2019. The case is a 16-month old male child. The child reportedly received a total of 9 OPV doses out of which 2 doses were from routine and 7 doses from SIAs.

Case (10): The case is from Mohmand district, KP Tribal Districts, with date of onset 20 December 2019. The case is a 6-month old male child. The child reportedly received a total 5 OPV doses out of which 3 doses were from routine and 2 from SIAs.

Case (11): The case is from Lakki Marwat district, KP province, with date of onset 22 December 2019. The case is an 18-month old male child. The child reportedly received 2 OPV doses from routine and 7+ doses from SIAs.

In 2019 to date, 128 WPV1 cases are reported from Pakistan. They include 77 from Khyber Pakhtunkhwa (KP) province, 12 from KP Tribal Districts (KPTD), 22 from Sindh province, 11 from Balochistan province and 6 from Punjab province. The most recent case has onset of paralysis on 22 December 2019.

b. *Environmental samples*: Nine new WPV1 positive environmental samples reported this week - all from Pakistan:

- Afghanistan: In 2019 to date, there are 52 wild positive environmental samples with most recent positive sample collected on 11 December 2019.
- Pakistan: In 2019 to date, there are 368 WPV1 positive environmental samples including 7 combined (WPV1 and cVDPV2) with most recent positive sample collected on 18 December 2019.

## II. Circulating Vaccine Derived Polioviruses (cVDPVs)

1. PAKISTAN: No new cVDPV2 isolates from human or environmental samples were reported this week. In 2019 to date, 12 cVDPV2 cases reported (onset of the most recent case is 22<sup>nd</sup> November). Cases include four from Diamir district of Gilgit-Baltistan (GB) province; two each from Torghar and Kohistan Lower, one each from Charsadda, Kohistan Upper districts in KP; one each from Islamabad and Gujranwala district, Punjab province.

Environment: Twenty five positive environmental samples for cVDPV2, the recent most sample collected on 4 December 2019 (including seven combined WPV1 and cVDPV2). In addition, cVDPV2 has been isolated from 16 healthy children and 8 contacts.

2. SOMALIA: No new cVDPV2 or cVDPV3 isolates from human or environmental samples were reported this week. In 2019 to date, Somalia has reported three cVDPV2 cases. The most recent reported case has date of onset of paralysis on 8 May 2019. aVDPV2 was isolated from an environmental sample collected on 3 February 2019. 2 cVDPVs were isolated from environmental samples collected on 10 November 2019.

In 2018: Somalia has reported a total of 12 cases due to cVDPVs, which include 5 due to cVDPV2, 6 due to cVDPV3 and 1 due to co-infection of cVDPV2 and cVDPV3. The last cVDPV3 was isolated from a sewage sample from Mogadishu collected on 23 August 2018.

## III. Surveillance performance indicators

In 2019, 20 of 22 member states are meeting the global target of both key surveillance indicators, namely non polio AFP rate of 2 per 100,000 children aged below 15 years and percent AFP cases with adequate specimen 80% and above.

- Djibouti has a non-polio AFP rate of 1.4
- Tunisia has a percentage of AFP cases with adequate stool specimens of 75.3%
- In Yemen there are AFP cases pending final classification more than 90 days due to delayed lab results because of delay in shipment of specimens to reference polio laboratories and high workload in the labs.

\* Confirmed polio cases refer to wild isolation from AFP cases or from contacts of negative index AFP cases

\*\* Non-polio AFP per 100,000 children &lt;15 years

\*\*\* Adequate here refers to two stool specimens collected at least 24 hours apart, within 14 days of paralysis onset and specimens received in the lab in Good Condition

\*\*\*\* AFP cases co infected with P1 and P3 are counted separately as wild isolates
