

## Promoting a peace and health dividend

 Using health diplomacy principles for national collaboration and coordination on public health challenges, based on evidence-based practices

 Improving qualitative and quantitative data production and sharing for collaboration and support to the humanitarian-development-peace nexus

 Building the capacity of national stakeholders on health diplomacy and conflict analysis to develop strategies and programmes.

 Promoting the use of health and peace dividend to contribute to community resilience and social cohesion

 Applying innovations and operational research to help Yemen transition from humanitarian to development progress

 Practicing community engagement in defining and providing services in rural and conflict areas

 Practicing community engagement in defining and providing services in rural and conflict areas

## Providing health care services

 Strengthening development of a service delivery model from community to tertiary levels and supporting priority health facilities to deliver the Minimum Service Package

 Supporting quality assurance standards in community health centers up to tertiary level through accreditation and performance-based awards

 Building workforce capacities in partnership with academia, including health technical institutes

 Investing in health information system architecture for improved decision-making, digital repository, and monitoring SDG indicators.

 Promoting DHIS2 usage by improving infrastructure, human/material resources support, and implementing a single reporting system.

 Strengthening national essential medicines policies by building capacities in key areas and increasing awareness/action on antimicrobial resistance

 Improving maternal/child health by increasing access to basic obstetric and pediatric services Supporting prevention and treatment of dengue, malaria, vaccine-preventable and other endemic diseases

 Supporting prevention and treatment of dengue, malaria, vaccine-preventable and other endemic diseases

# Key Health Priorities for Yemen

## 2024-2025

World Health  
Organization

Yemen

## Promoting healthier lives and well-being

Integrating noncommunicable diseases and mental health within primary health care, by providing capacity-building and contributing to the availability of essential supplies

Improving sustainable environmental practices in health facilities, including water efficiency, waste management, and carbon reduction

Implementing the national nutrition strategy to address all forms of malnutrition

Building national capacities to provide timely lifesaving emergency care for road traffic injuries

Expanding prevention and early intervention services for NCDs

Promoting social behavior change to improve food safety; reducing vaccine-preventable diseases; preventing all forms of malnutrition; reducing chronic disease risk factors

## Protecting the population

Enforcing the understanding and implementation of one health approach with the engagement of all relevant sectors in collaboration with Quadripartite (WHO, FAO, WOAHA and UNEP)

Improving IHR core capacities, prioritize early detection, control, and response to diseases, and endorsing Yemen's National Action Plan

Strengthening public health emergency management as an integral part of the overall emergency management capacities

Enhancing the emergency/acute care system including pre-hospital, health facility-based emergency services and rehabilitation care
